SERIES 996 / 997

REGOLARE L'ALTEZZA

Regolare l'altezza del tavolo è semplice e veloce, basta sollevare il piano e ogni "click" indicherà uno scatto di regolazione verso l'alto.

Per abbassare il tavolo basta invece portare il piano alla sua massima altezza, oltre alla quale il dispositivo di regolazione verrà liberato e il piano comincerà a muoversi lentamente verso il basso, grazie al suo meccanismo di rilascio lento. Quando il piano sarà sceso completamente un "click" ne indicherà il bloccaggio, e il piano sarà quindi pronto per una nuova regolazione.

ADJUSTABLE HEIGHT

Table's adjustment operation is simple and speedy. It is necessary to lift the top and every "click" indicates the regulation towards top part.

To lower the table it will be enough to put the top to the maximal height, the regulation gear will be free and the top will slowly start moving towards the lower part, thanks to its slow release gear.

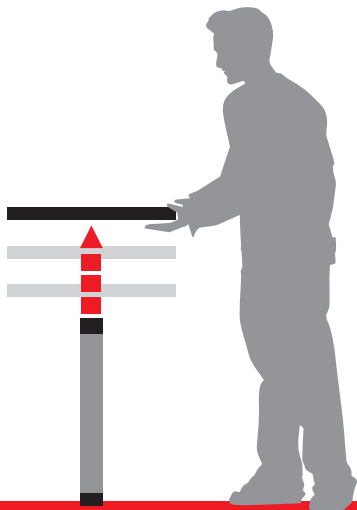

When the top is completely down, one "click" indicates the lock and the top will be ready to be once more adjusted.

REGLER L'HAUTEUR

Regler l'hauteur de la table est simple et rapide, il faut élever le top et chaque "click" indique un déclenchement de régulation vers l'haut.

Pour baisser la table il faut mettre le top à l'hauteur maximale, après laquelle le mécanisme de régulation sera libre et le top se mettra en mouvement lentement vers le bas, cela grâce au mécanisme lent de relèvement.

Quand le top sera complètement descendu, un "click" indiquera le blocage et le top sera prêt pour une nouvelle régulation.

La colonna dispone di un sistema di bloccaggio "Rigiblock" che conferisce alla gamba maggiore stabilità. Inoltre "Rigiblock" elimina l'effetto rotazione.

The column has a "Rigiblock" system which gives to the leg a major stability. The "Rigiblock" system eliminates rotation effects.

La pata a un système appelé "Rigiblock" qui donne au pied une meilleure stabilité. Le "Rigiblock" système élimine l'effet rotation.
